SUMMARY

Computer Science engineering student specializing in Java, Spring Boot, and distributed systems (Kafka, Redis, WebSockets). Built systems spanning REST APIs, real-time collaboration, event-driven architectures, and AI-integrated services. Open-source contributor with hands-on experience debugging and stabilizing live codebases, including memory leaks and cascading API failures.

EXPERIENCE

Open Source Contributor — Backend

May 2026

GirlScript Summer of Code (GSSoC) — CommitPulse (GitHub analytics platform)

- Fixed a production **memory leak** (TTLCache OOM) with a GC sweep, FIFO eviction, and a **destroy()** lifecycle hook.
- Hardened the GitHub API fetch layer with **Promise.allSettled** and **AbortSignal**, preventing dashboard crashes.

Software Engineer (Freelance)

Feb 2026

BiteBox — Cafe Billing & POS System — Flutter, Firebase, SQLite

- Built the backend for a POS system, cutting recurring SaaS costs by **Rs. 12,000/yr** on Firebase's free tier.
- Designed a **dual-database** (SQLite + Firebase) architecture for offline-first sync and **sub-50ms** analytics.
- Implemented atomic invoicing, role-based access control, and ESC/POS Bluetooth thermal printing.

PROJECTS

Parallax — Collaborative Development Platform | Java, Spring Boot, WebRTC, Docker, React

[GitHub]

- Collaborative IDE supporting **50+ concurrent users** with OT-inspired sync and live cursors.
- **WebRTC** peer-to-peer voice/video via a custom STOMP/WebSocket signaling engine, in-IDE.
- **Docker**-orchestrated code sandbox achieving **sub-150ms** cold-start via container pre-allocation.

NextLevel — Productivity Platform | Spring Boot, Spring AI, MongoDB Atlas Vector Search

[Live] [GitHub]

- Semantic knowledge vault using **Spring AI**, **Groq Llama-3.3**, and MongoDB Atlas Vector Search.
- Async ingestion pipeline via **JobRunr** + **Resilience4j** with automatic LLM failure recovery.
- Real-time **RAG** assistant with SSE streaming and a custom SM-2 spaced-repetition engine.

JSON Parser Library | Java, JUnit 5

[Live] [GitHub]

- **Zero-dependency** Java parser with custom lexer and recursive descent, supporting **RFC 8259/JSON5**.
- **Zero-allocation** streaming parser processes **10MB+** payloads in O(1) memory, cutting heap **95%**.
- Interactive **React** + **TypeScript** visualizer using React Flow for real-time JSON-to-AST graphs.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, TypeScript, Python, C

Java Backend: Core Java, Java 8, Collections Framework, Multithreading, Exception Handling, OOPs, JDBC

Frameworks: Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, REST APIs, JWT Authentication, Microservices, Spring AI

Distributed Systems: Apache Kafka, Redis, WebSockets, Event-Driven Architecture, WebRTC

Databases: MySQL, PostgreSQL, MongoDB, SQLite

Cloud / DevOps: Docker, AWS, Firebase, Git, GitHub

Testing & Tools: JUnit 5, Maven, Postman

CERTIFICATIONS & ACHIEVEMENTS

- Winner of the **ServiceNow × Deloitte HackNow** hackathon for building **Sentinel AI**, an immigration compliance platform integrating ServiceNow workflows with **Azure Document Intelligence** and **Twilio**.
- ServiceNow Certified Application Developer (**CAD**).
- ServiceNow Certified System Administrator (**CSA**).
- AWS Academy Graduate - AWS Academy Cloud Foundations.
- HackerRank Certified: Java & Python.
- Selected for **State-Level Regional** at OpenAI Academy × NxtWave × IndiaAI Hackathon.

EDUCATION

Parul University

B.Tech in Computer Science & Engineering | CGPA: 7.99

Vadodara, Gujarat

2023 – 2027
